

## 14. har-flex® Connectors

The continuous scalability by an even number of contacts, i.e. from 6 to 100, of the HARTING's har-flex® mezzanine connector series is a special feature forming an ideal basis for customized applications. The advantage is clearly evident considering that the connector is always optimized to suit specific applications on the device PCB, while also covering the medium- and small-scale volume range that is typical for the production of industrial devices.

### Application profile:

CONNECTION TYPE		ENVIRONMENT		APPLICATION			high performance			
Board to Board	Cable/Wire to Board	IP20	IP65 / IP67	Data	Signal	Power	Data transfer rate	Shielding	Number of contacts, contact density	Voltage, working current
<b>Cable termination</b>				<b>PCB termination</b>				<b>Application standard</b>		
<i>Han-Quick Lock®</i>	<i>IDC</i>	<i>Crimp</i>		<i>THT</i>	<i>SMC</i>	<i>SMT</i>				
 Screw	 Cage clamp	 Axial screw		 Press-in						
<b>Housing integration</b>				<b>Separate housing</b>				<b>Integrated housing</b>

### har-flex® CONNECTORS

With *har-flex*®, HARTING has developed a general-purpose PCB connector series for internal and external Device Connectivity. The continuous scalability by an even number of contacts, i.e. from 6 to 100, of the HARTING's *har-flex*® mezzanine connector series is a special feature forming an ideal basis for customized applications. The advantage is clearly evident considering that the connector is always optimized to suit specific applications on the device PCB, while also covering the medium- and small-scale volume range that is typical for the production of industrial devices.

This flexibility is new – HARTING turns an individual design into a standard component. No special tooling changes are needed for customer-specific solutions, thus HARTING can realize a short delivery time.

### PRODUCT DIVERSITY

The *har-flex*® product range with SMT termination technology is based on a 1.27 mm grid. With its diverse variants, HARTING provides connectivity solutions for many different board-to-board and cable-to-board applications. For example, two straight connectors are used for the mezzanine application, two angled connectors for PCBs on one level, and a combination allows the well-known pairing of mother and daughter cards. By using an IDC flat band cable, two PCBs with large space between can be connected.

Cable-to-Board

Mother-to-Daughtercard

Extender-Card

Mezzanine

# Specific features of the product range

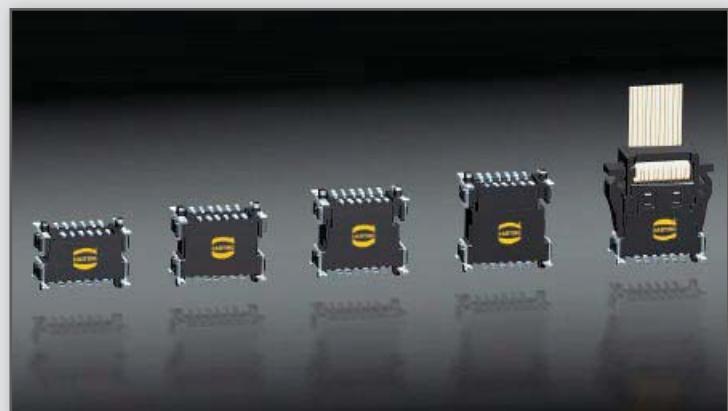

## Many pin count options

HARTING has developed a modular tooling concept which offers a broad choice of configurations between 6 and 100 poles in even numbered positions. This flexibility in the choice of number of contacts, combined with high density contact spacing, allow the designer to maximize the use of PCB real estate, thereby achieving overall space savings and cost efficiencies.

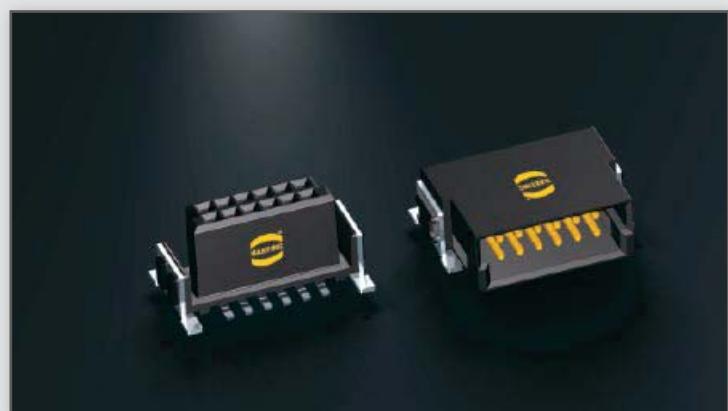

## Flexible board-to-board distances

HARTING covers mezzanine applications with a range of straight versions for four different stacking heights that can be used to interconnect PCBs arranged in parallel stacks with spacing between 8.0 mm and 13.8 mm. Additional stacking heights are in development. For applications requiring larger spacing between boards HARTING offers compatible cable assemblies terminated with insulation displacement technology.

## Robust design

The special SMT fixing ensures a robust and enduring connection to the PCB and helps to absorb mechanical stress on the solder contacts resulting from insertion and removal forces.

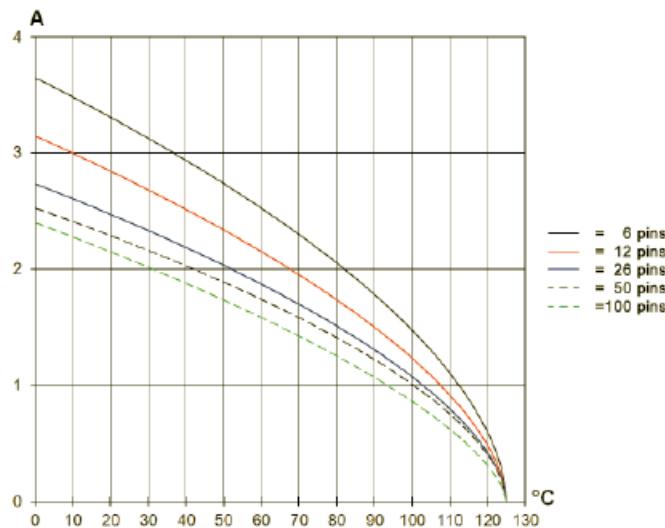

## Automated processing features

The *har-flex®* SMT connectors meet the highest demands in terms of their processing capabilities. Special blister packaging provides protection during shipping and handling, while the "pick and place" pads enable automated assembly of the PCBs. The temperature resistant materials of the insulating body, in combination with consistent testing of the coplanarity of contacts, ensure reliable soldering capabilities of the connectors in the reflow process.

Number of contacts	6, 8, 10 ... 96, 98, 100	Current carrying capacity acc. to IEC 60512-5-2  The current carrying capacity is limited by maximum temperature of materials for inserts and contacts including terminals. The current capacity-curve is valid for continuous, not interrupted current-loaded contacts of connectors when simultaneous power on all contacts is given, without exceeding the maximum temperature. Control and test procedures according to DIN IEC 60512-5-2.

## Durability

### Performance level 1 (recommended for majority of applications)

Initial 250 mating cycles, 10 days gas test (25 °C/75 % r.h.) using H<sub>2</sub>S 10 ppb, NO<sub>2</sub> 200 ppb, CL<sub>2</sub> 10 ppb, SO<sub>2</sub> 200 ppb. Measurement of contact resistance. The remaining 250 mating cycles are subject to measurement of contact resistance and visual inspection. Visual inspection. No abrasion of the contact finish through to the base material. No functional impairment.

Part number definition: 15 .. ... 2 .. ...

### Performance level 2

Initial 125 mating cycles, 4 days gas test (25 °C/75% r.h.) using H<sub>2</sub>S 10 ppb, NO<sub>2</sub> 200 ppb, CL<sub>2</sub> 10 ppb, SO<sub>2</sub> 200 ppb. Measurement of contact resistance. The remaining 125 mating cycles are subject to measurement of contact resistance and visual inspection. Visual inspection. No abrasion of the contact finish through to the base material. No functional impairment.

Part number definition: 15 .. ... 6 .. ...

### Performance level S4

Defined contact surface of min. 0.06 µm Au over 0.7+0.2 µm PdNi.

Part number definition: 15 .. ... 5 .. ...

## Working voltage acc. to IEC 60664-1

The working voltage depends on user specific operational conditions. Depending on the installation category, the degree of pollution and the entire electrical environment, the working voltage is different. The standard IEC 60664-1 specifies, in general, the minimum insulation distances for equipment. But it can also be used to determine the maximum working voltage with given requirements.

The following table shows the most common conditions applicable for the har-flex® connectors and exemplary calculations for the working voltage. For installation category, degree of pollution and other requirements which are not shown in the table we refer to the IEC 60664-1.

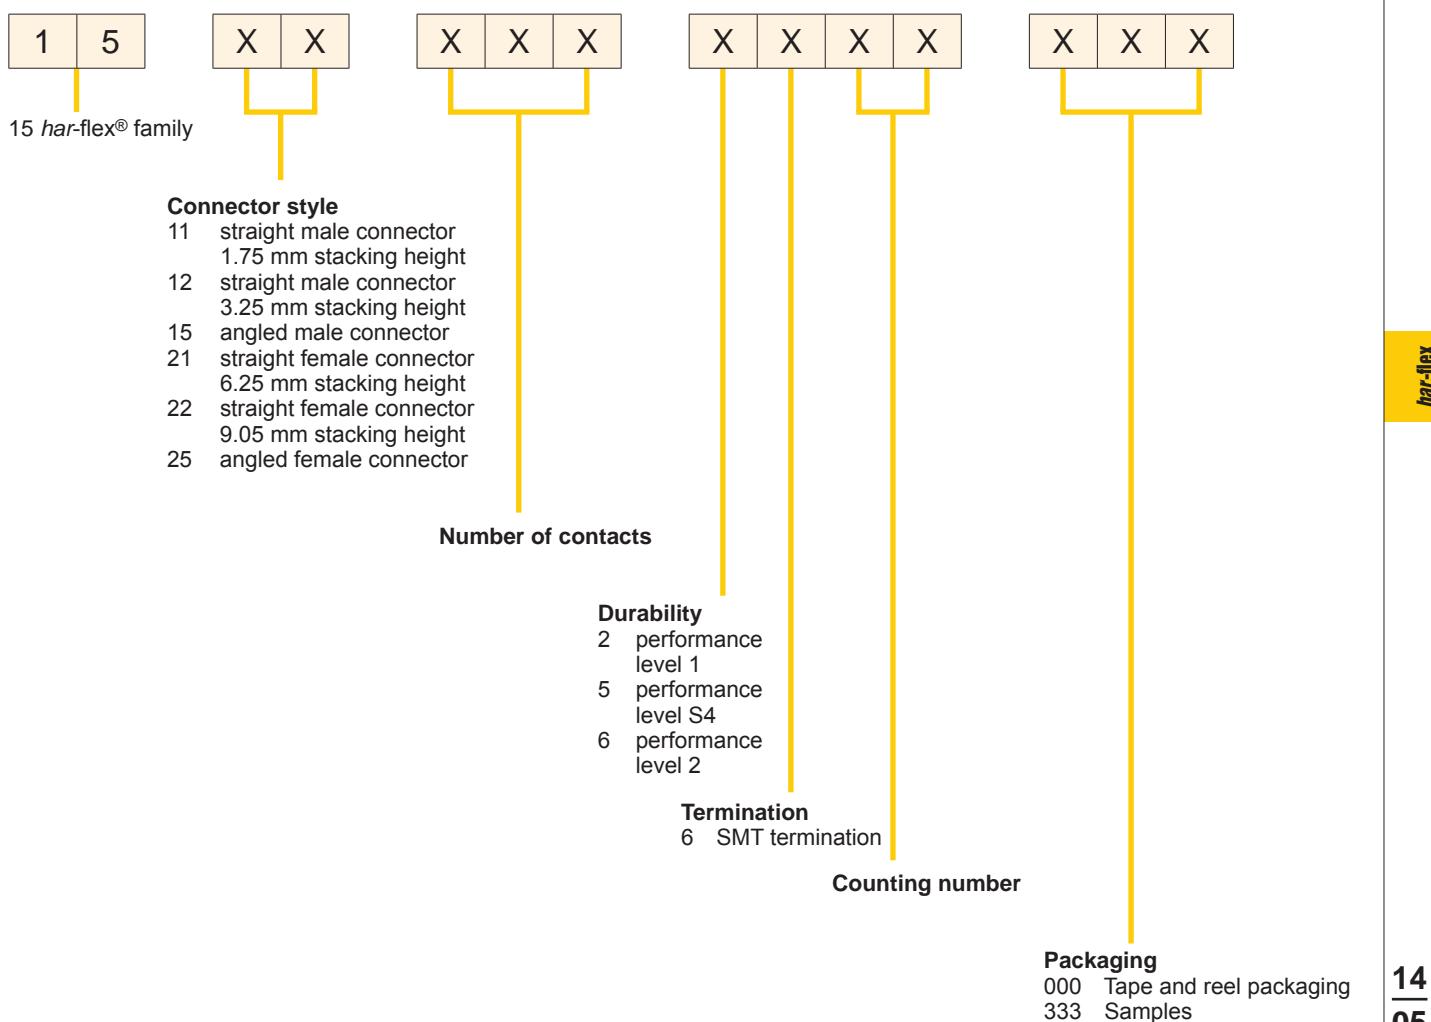

Clearance / Creepage distance	0.4 mm			
CTI-Value	< 400			
Isolation group	III a/b			
Electrical field type	Case A (Inhomogeneous field)		Case B (Homogeneous field)	
Installation category	I	II	I	II
Degree of pollution	1	1	1	1
<b>Working voltage max.</b>	<b>150 V</b>	<b>100 V</b>	<b>150 V</b>	<b>150 V</b>

## Explanations:

- CTI value and isolation group are fixed values by the har-flex® connector characteristics.
- Installation category I: Equipment is intended for use only in appliances or installation parts, in which no overvoltages can occur. Equipment in this installation category is normally operated at extra low voltage.
- Installation category II: Equipment is intended for use in installations or parts of installations, in which lightning overvoltages need not be considered. Overvoltages caused by switching must be taken into account.
- Pollution degree 1: No pollution or only dry, non-conductive pollution occurs. The pollution has no influence.
- Pollution degree 2: Only non-conductive pollution occurs. A temporary conductive caused by condensation must be expected occasionally.

## Part number definition

The har-flex® part numbers have 14 digits and are based on the following scheme:

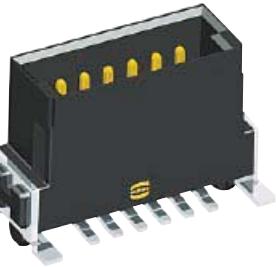

### Stacking heights of straight connector versions

The har-flex® connectors cover mezzanine applications with a range of straight versions for four different stacking heights that can be used to interconnect PCBs arranged in parallel stacks with spacing between 8.0 mm and 13.8 mm.

Male 1.75 mm

Male 3.25 mm

Female 6.25 mm

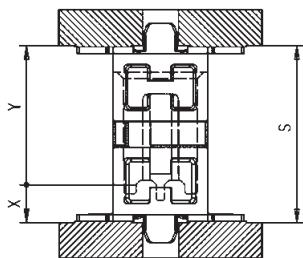

Female 9.05 mm

Due to the wiping lengths of 1.5 mm, these four connectors cover the distance of 8 mm to 13.8 mm continuously.

poles 58 to 80	72.4
poles 82 to 100	88.4

## SMT processing notes

The *har-flex®* SMT connectors meet the highest demands in terms of their processing capabilities.

The connectors are delivered in a tape and reel packaging optimized for automatic assembly machines. A vacuum cover enables the automatic assembly with a vacuum nozzle.

The insulation body material is high temperature resistant, and due to the black colour a secure camera recognition is ensured.

For a reliable SMT solder process, the termination pins are 100 % checked for coplanarity.

## Process / Moisture Sensitivity

During the reflow solder process, the connector has to resist extreme variations in temperature. Connectors consist in general of both plastic and metal parts, which have a different behaviour during the solder process. The Process Sensivity and also the Moisture Sensivity are tested according the ECA/IPC/JEDEC J-STD-075 specification.

### Process Sensivity:

**PSL** means Process Sensitivity Level. PSL is a rating used to identify a component that is solder process sensitive. Damages of the connector after three times soldering are not permitted (e.g. melted edges).

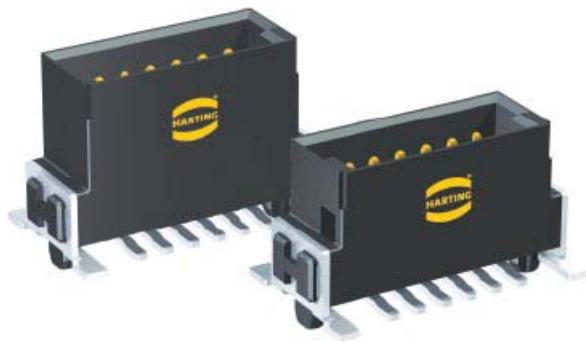

### Moisture Sensitivity:

**MSL** means Moisture Sensitivity Level. MSL is a rating indicating a component's susceptibility to damage due to absorbed moisture during storage. Damages of the connector after storage in damp heat and three times soldering are not permitted (e.g. blisters).

The *har-flex®* connectors are rated with **PSL R0** and **MSL 1**. This is the maximum possible rating in both categories. The *har-flex®* connector resists three times soldering at the following conditions without damages:

- min. 150 s beyond 217 °C (liquidus temperature, the melting point of the solder paste)
- min. 30 s beyond classification temperature (240 °C / 245 °C for *har-flex®*)
- Temperature solder profile according to ECA/IPC/JEDEC J-STD-075
- For MSL test, a storage of 168 hours at 85 °C and 85 % rel. humidity was carried out

As the result, the *har-flex®* connectors are not process sensitive and not moisture sensitive according to ECA/IPC/JEDEC J-STD-075.

15. *har-flexicon*<sup>®</sup> Connectors

*har-flexicon®* is the robust PCB termination technology for single wires. Components for the termination of industrial devices in the pitches of 1.27 mm, 2.54 mm, 3.50/3.81 mm, 5.00/5.08 mm and 10.16/15.00 mm

All components are particularly suited for reflow- and wave-soldering on the PCB and offer field assembly with PushIn, insulation displacement and screw termination for single wires.

### *Application profile:*

Connection Type		Environment		Application						
Board to Board	Cable/Wire to Board	IP20	IP65 / IP67	Data	Signal	Power	Data transfer rate	Shielding	Number of contacts, contact density	Voltage, working current
										

### Cable termination

Pitches 10.16 mm / 15.00 mm	
PCB terminal blocks with screw termination .....	15.48

### har-flexicon® CONNECTORS

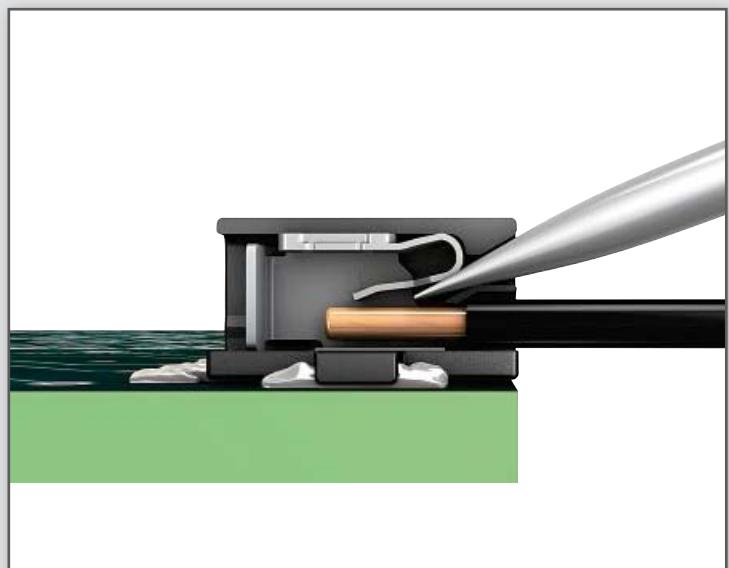

Innovative device connectivity technology for all lifelines of industrial devices - it routes power, data and signals through the side of the device to the PCB.

HARTING *har-flexicon*® in the pitches 1.27 mm and 2.54 mm is the miniature SMD connector for the rapid connection of single wires and provides a perfect link between the periphery and PCBs in industrial devices. HARTING is thereby continuing along the path already taken with the *har-flex*® of rethinking and methodically optimizing device connectivity technology.

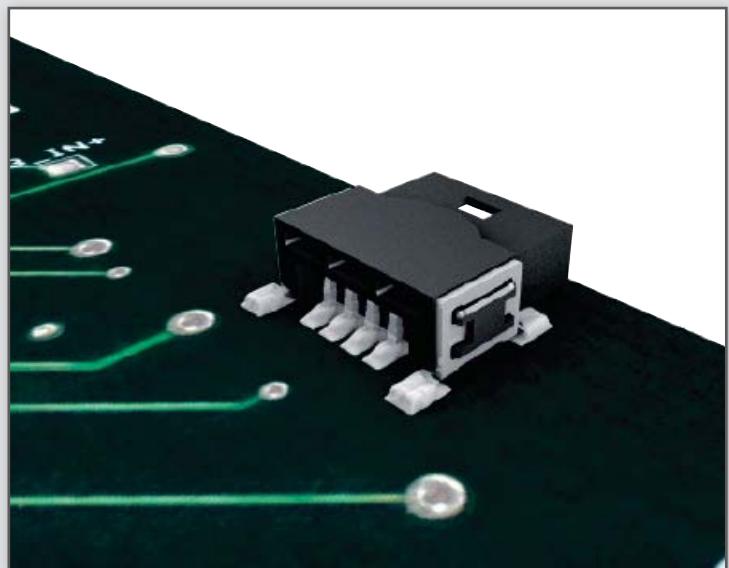

## RAPID CONNECTION OF INDIVIDUAL WIRES

*har-flexicon*® is very easy and quick to use for the smallest of designs. This, in conjunction with a precise cable manager, is what the IDC and the push-in spring-cage termination technology guarantees.

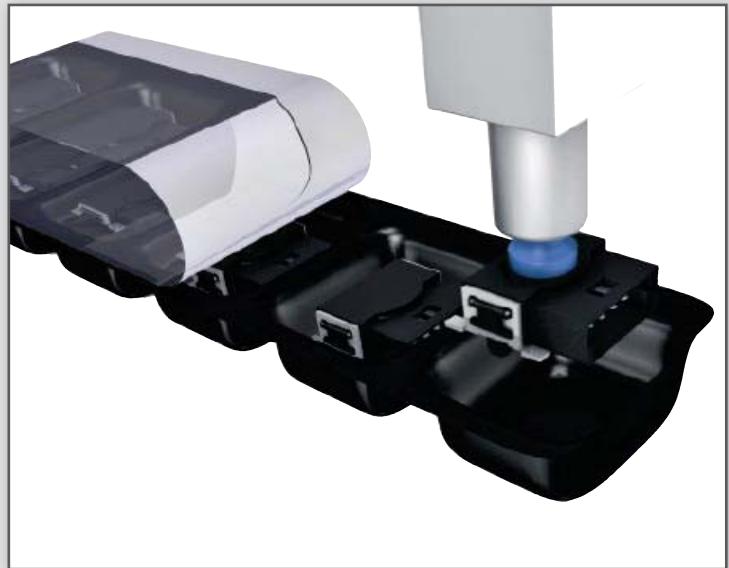

## ROBUST SMD DESIGN

The large-area SMT fixings of *har-flexicon*® provide a sturdy connection to the PCB. Insertion and withdrawal forces can be absorbed in order to take the pressure off solder contacts on the connection side.

## FULLY AUTOMATIC PROCESSING

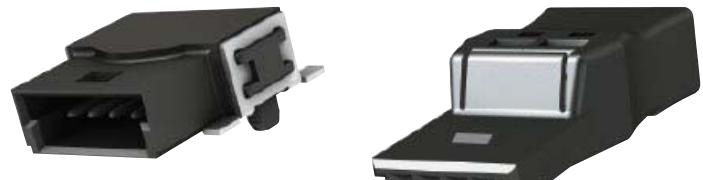

The use of reflow and SMD-solderable components in automated mount and soldering processes simplifies, and hence optimizes, the production of PCBs.

PCB connectors with IDC termination  
for SMT reflow soldering  
pitch 1.27 mm
